

Classification Justification Statement – Carcinogenicity

Consolidated Energy Insulation

Product

Consolidated Energy Glasswool Insulation

Description

Glasswool insulation fibre with alkali and alkaline earth oxide content exceeding 18% by weight, consistent with modern low-bio-persistence formulation described in IARC Volume 81.

Purpose of this Statement

This document provides the formal justification for the **interim classification approach** applied to the above glass wool insulation products with respect to **carcinogenicity under GHS / CLP**, in circumstances where **Note Q biosolubility testing has not yet been completed**.

This statement is intended to support regulatory discussions, audits, supplier assessments, and internal compliance records.

Regulatory Framework

- **EU CLP Regulation (EC) No 1272/2008**, Annex VI, Notes Q and R (classification at manufacture and import)
- **Globally Harmonized System (GHS)** – Carcinogenicity, Category 1B
- **Australian WHS Regulations** adopting GHS (7th edition)
- **Model WHS Laws – Duties of Importers of Hazardous Chemicals**

As the products are **manufactured in China and imported** into the Australian market, the importer assumes the role of **supplier** under WHS law and is responsible for correct classification, labelling, and SDS accuracy at the point of import.

Fibre Chemistry Assessment

Based on available formulation data and manufacturing controls, the fibre chemistry of the glass wool products:

- Is consistent with **modern biosoluble glass wool compositions**
- Falls within oxide composition ranges historically associated with **rapid in-vivo and in-vitro dissolution**
- Is aligned with fibre chemistries that have previously qualified for **Note Q exemption** when tested

On the basis of fibre chemistry alone, there is **no indication of biopersistent behaviour** typically associated with carcinogenic man-made mineral fibres.

Current Testing Status

At the time of issue of this statement:

- Formal **Note Q biosolubility testing has not yet been completed**
- No in-vivo or in-vitro dissolution test reports are currently available
- Testing is planned / under consideration to confirm regulatory exemption

Until such testing is finalised, the product **cannot be formally claimed as Note Q compliant**.

Interim Classification Position

In the absence of completed Note Q testing, and applying a precautionary regulatory approach:

- The product is **temporarily treated as not exempt** from carcinogenic classification
- **Carcinogenicity Category 1B (H350 – May cause cancer)** is applied on an interim basis
- This classification is **not based on evidence of carcinogenicity**, but solely on the absence of confirmatory exemption data

This approach is adopted to ensure: - Conservative compliance with GHS / CLP requirements - Transparency with downstream users and regulators - Avoidance of under-classification risk

Important Clarification

This interim classification:

- **Does not imply confirmed carcinogenic risk** for the product
- **Does not contradict** the strong indication from fibre chemistry that the product is biosoluble
- Is expected to be **reviewed and revised** once Note Q testing is completed

Upon successful demonstration of biosolubility in accordance with Note Q, the carcinogenic classification **will be withdrawn**, and labels, SDSs, and technical documentation will be updated accordingly.

Commitment to Review

The importer commits to:

- Completing appropriate **Note Q biosolubility testing** (either directly or via the manufacturer)
 - Reviewing the carcinogenic classification promptly upon availability of test data
 - Updating all **labels, SDSs, and import documentation** without undue delay
 - Ensuring alignment between **EU CLP classification at manufacture** and **Australian WHS classification at import**
-

Limestone		China		0.0228KG		2.16%			
Fiber Binding Agent		China		0.05KG		5%			
						Total: 100%			
manufacturing procedure	Smash	Mix	Fusing	Fiber Form	Solidify	Cooling	Worn edge recycling	Cross-cut packaging	

Example of Warning label

DANGER May cause cancer H350

Prevention: Use in well-ventilated areas, Avoid breathing dust or fibres,
Wear protective gloves, protective clothing, eye and face protection,
Wash hands and exposed skin thoroughly after handling,
See Safety Data Sheet for full instructions.

Scan barcode for Safety Data Sheets, Hazard Statements, Technical Data and
Installation/Handling Guides.

Statement of Good Faith

This classification decision has been made in **good faith**, based on current information, recognized regulatory frameworks, and a precautionary compliance strategy.

It is not intended to misrepresent the inherent properties of the product, but to maintain regulatory robustness pending final confirmatory testing.
